Descripción de proyecto

Requests

pypi v2.34.2 python 3.10 | 3.11 | 3.12 | 3.13 | 3.14 | 3.15
downloads/month 2G contributors 402 docs passing

Requests is a simple, yet elegant, HTTP library.

```
>>> import requests
>>> r = requests.get('https://httpbin.org/basic-auth/
>>> r.status_code
200
>>> r.headers['content-type']
'application/json; charset=utf8'
>>> r.encoding
'utf-8'
>>> r.text
'{"authenticated": true, ...'
>>> r.json()
```

[Documentation](#)

Metainformación

- **Licencia:** Apache Software License (Apache-2.0)
- **Autor:** [Kenneth Reitz](#) __
- **Responsable:** [Ian Stapleton](#) [Cordasco](#) __
- **Requiere:** Python

```
{'authenticated': True, ...}
```

Requests allows you to send HTTP/1.1 requests extremely easily. There's no need to manually add query strings to your URLs, or to form-encode your `PUT` & `POST` data — but nowadays, just use the `json` method!

Requests is one of the most downloaded Python packages today, pulling in around `300M downloads / week` — according to GitHub, Requests is currently [depended upon](#) by `4,000,000+` repositories.

Installing Requests and Supported Versions

Requests is available on PyPI:

```
$ python -m pip install requests
```

Requests officially supports Python 3.10+.

Supported Features & Best-Practices

Requests is ready for the demands of building robust and reliable HTTP-speaking applications, for the needs of today.

- Keep-Alive & Connection Pooling
- International Domains and URLs
- Sessions with Cookie Persistence
- Browser-style TLS/SSL Verification
- Basic & Digest Authentication
- Familiar `dict`-like Cookies
- Automatic Content Decompression and Decoding
- Multi-part File Uploads
- SOCKS Proxy Support
- Connection Timeouts
- Streaming Downloads

>=3.10

- **Provides-Extra:**

`security`,
`socks`, `use-`
`chardet-on-py3`

- Automatic honoring of `.netrc`
- Chunked HTTP Requests

Cloning the repository

When cloning the Requests repository, you may need to add the `-c fetch.fsck.badTimezone=ignore` flag to avoid an error about a bad commit timestamp (see [this issue](#) for more background):

```
git clone -c fetch.fsck.badTimezone=ignore https://g-
```

You can also apply this setting to your global Git config:

```
git config --global fetch.fsck.badTimezone ignore
```
